

vRx: A prescription for vuln remediation

vRx allows organizations to manage the entire vulnerability lifecycle in a single pane of glass - reducing cost, complexity, and risk

No third parties

vRx is not dependent on third-party integrations, allowing you to stand-up your mature vulnerability management and remediation program without buying expensive licenses that require on-going maintenance to return value.

One platform

A consolidated, real-time system with built-in detection, prioritization, and remediation reduces MTTR (Mean time to Remediate) from 180 to 27 days.

24/7 Security

vRx's Patchless Protection™ provides an additional security layer to ensure you're always protected even when there's no patch or update available.

Precise prioritization

Every app, OS, and asset are accurately prioritized so your team can focus their efforts where it's needed most and ignore the noise of vulnerabilities less likely to be exploited in your environment.

Great value

All of vRx's features are included for one price which is simply based on the number of agents, providing customers with fantastic ROI.

Robust scripting

vRx's scripting engine allows for greater flexibility when mitigating configuration based vulnerabilities, deploying software, or performing any other IT and Security tasks.
